- Introduction
  - Creating a ProEclipse Database
  - Creating a Subject Capture Session

Introduction

This guide covers:

- Creating a Database
- Creating a new Capture session

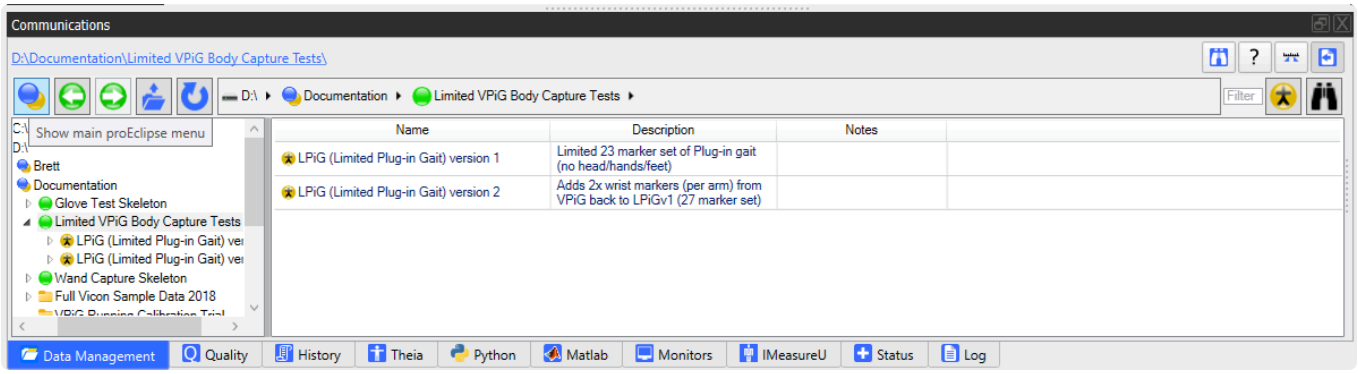

This is the first of the three capture preparation guides:

1. ***Creating a Database***
2. Creating a Labelling Skeleton
3. Creating a Subject

If you have previously set up a database and capture session, you can skip this guide.

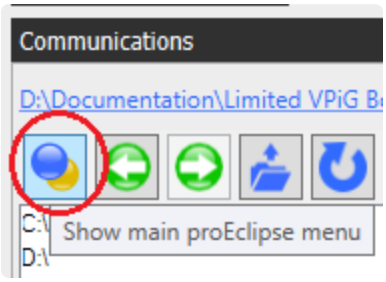

Creating a ProEclipse Database

Navigate to the **Communications panel**, and the **data management tab** within (by default this panel is at the bottom of Vicon Nexus, the the data management tab is the default open tab).

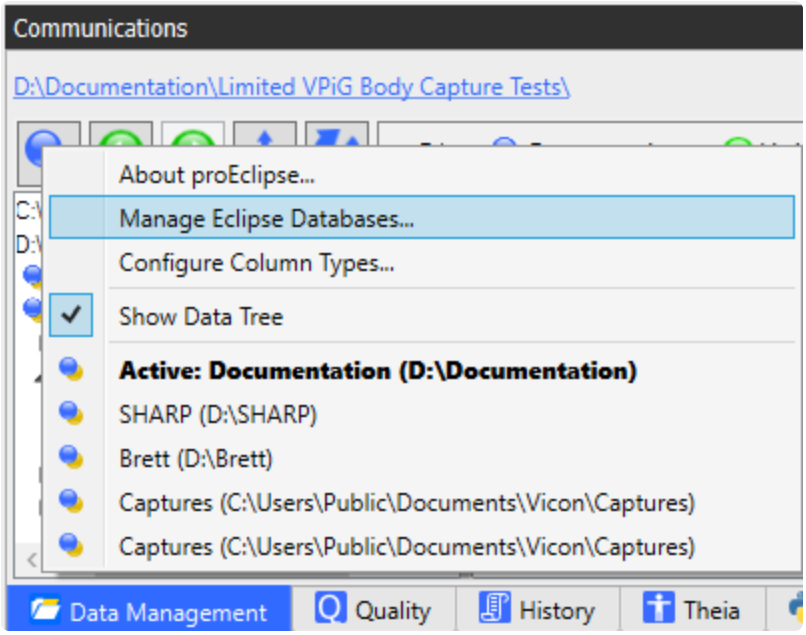

Communications panel and data management tab

Click the '**Show main ProEclipse menu**' button

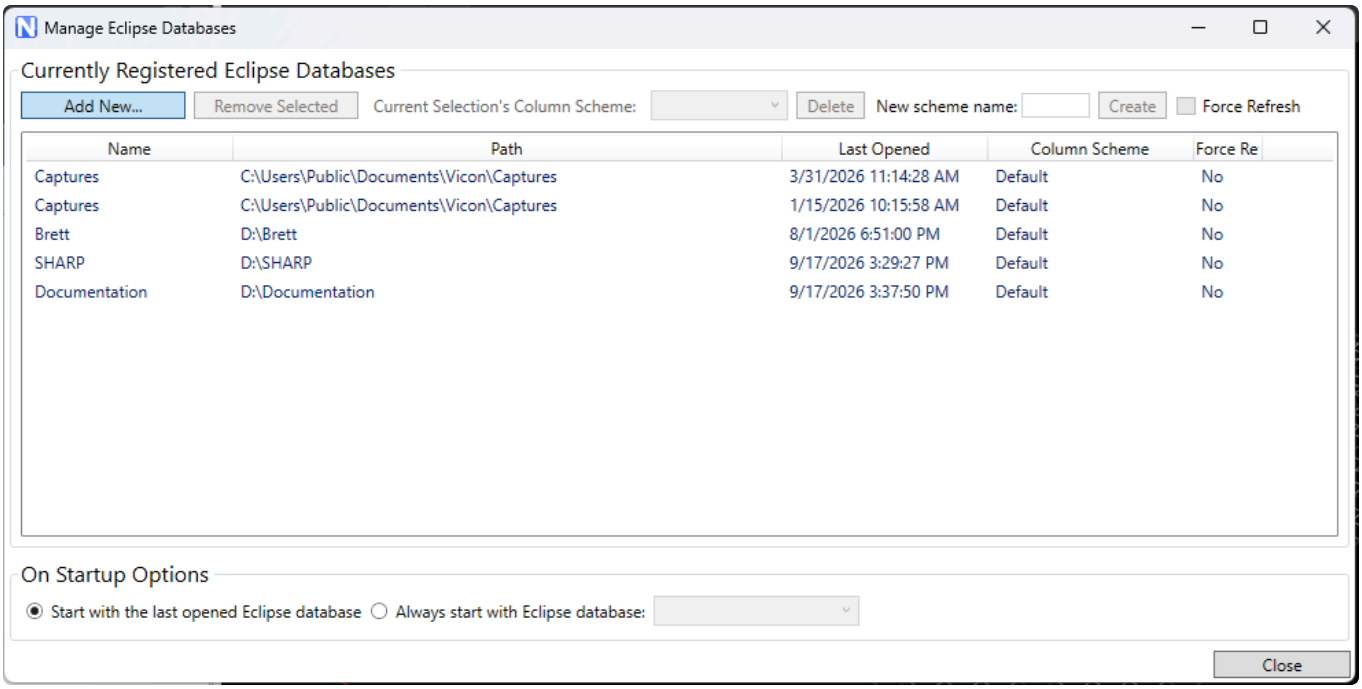

proEclipse menu button

Click '**Manage eclipse databases**'.

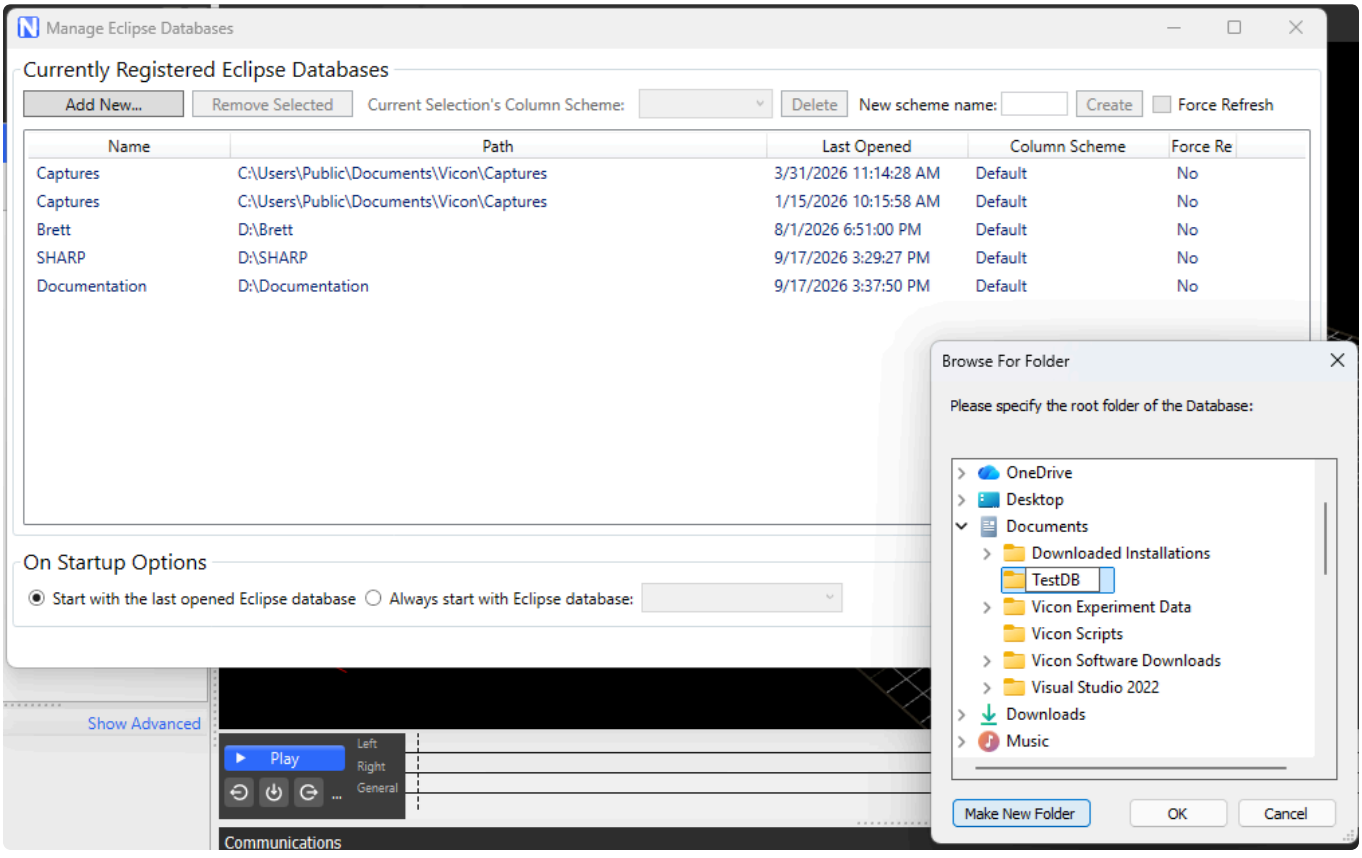

Dropdown from clicking proEclipse menu button

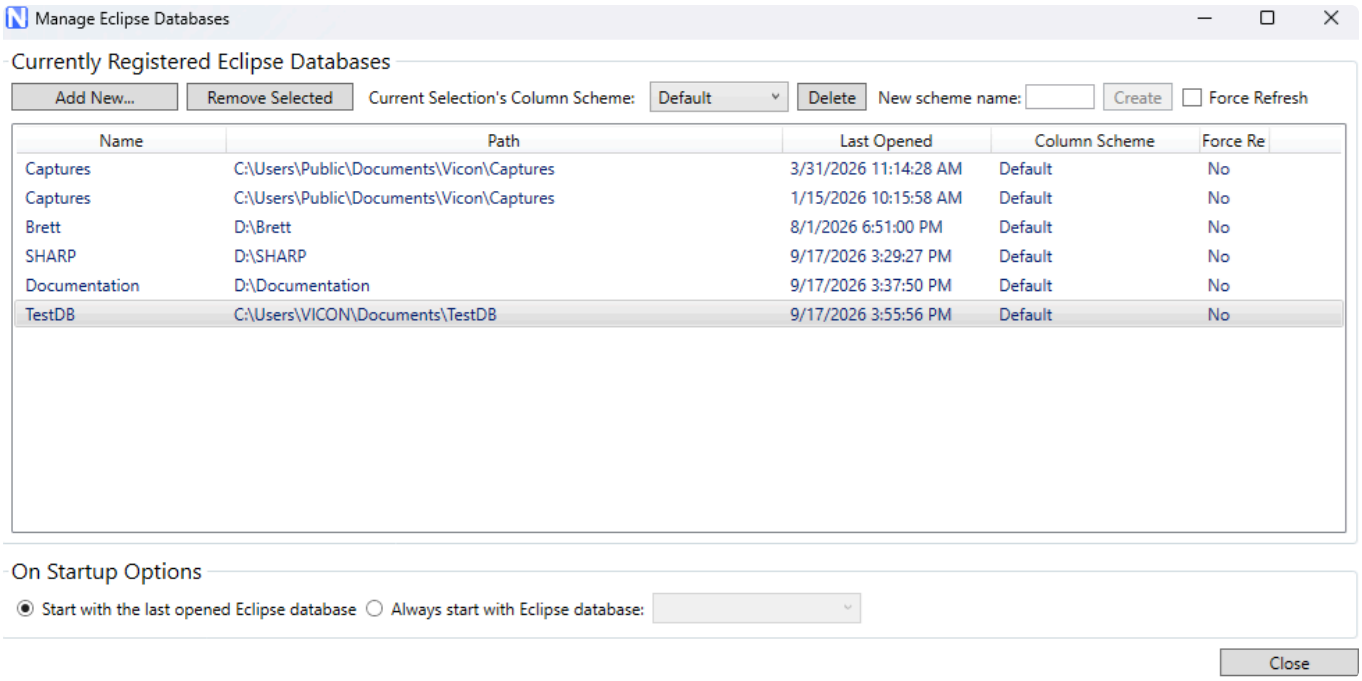

Eclipse database management window

Use **'add new'** and select a destination directory - create new directory to keep information there

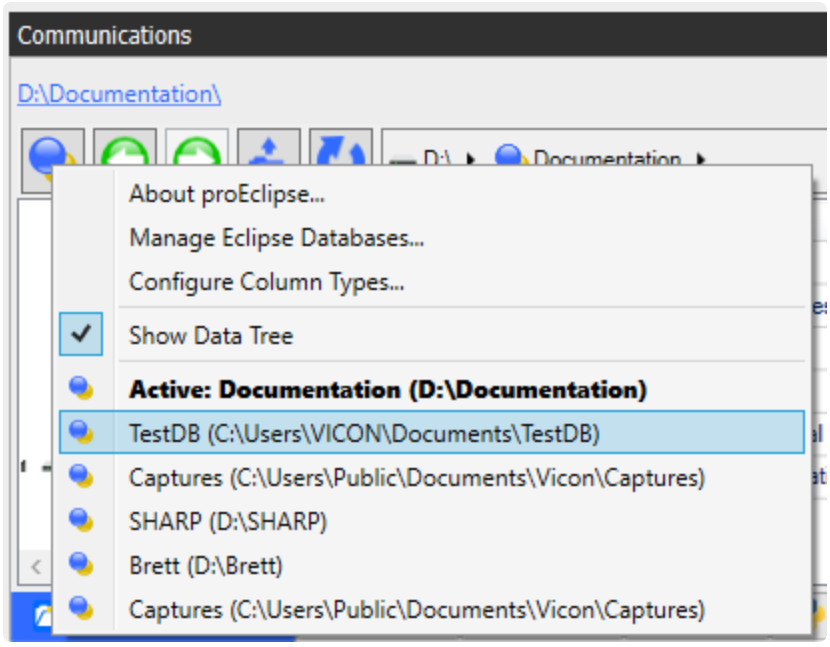

Adding a new database

Exiting the database management window

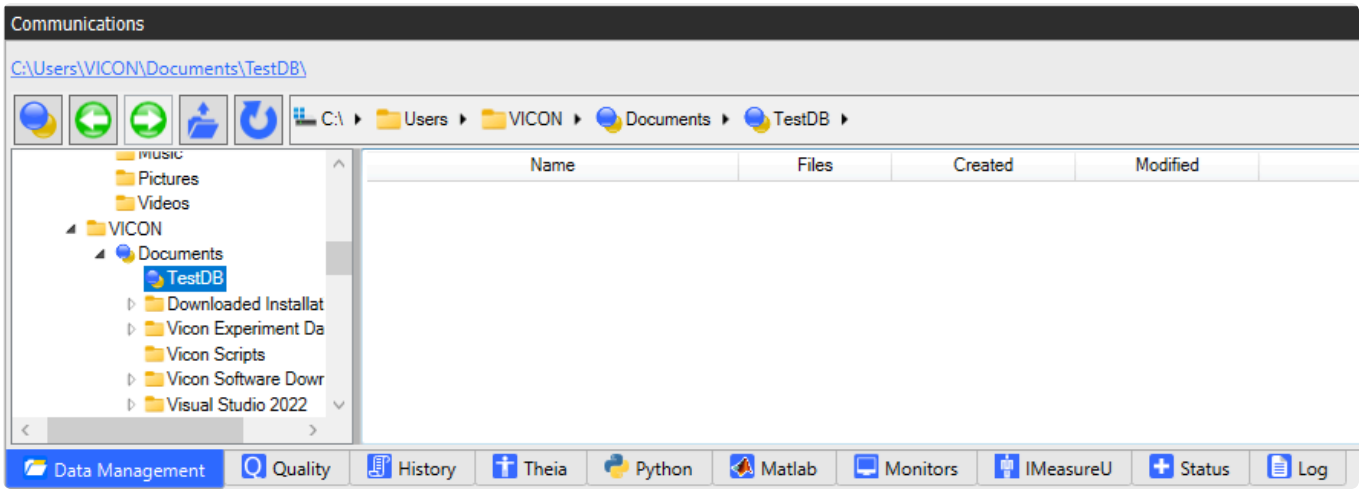

Selecting the DB in this menu and closing the 'Manage Eclipse Databases' window does not select the database!

In order to do this you must click the '**show main ProEclipse menu**' button again and select the database

Selecting a database from the proEclipse dropdown

Alternatively you can navigate to the database through the file explorer.

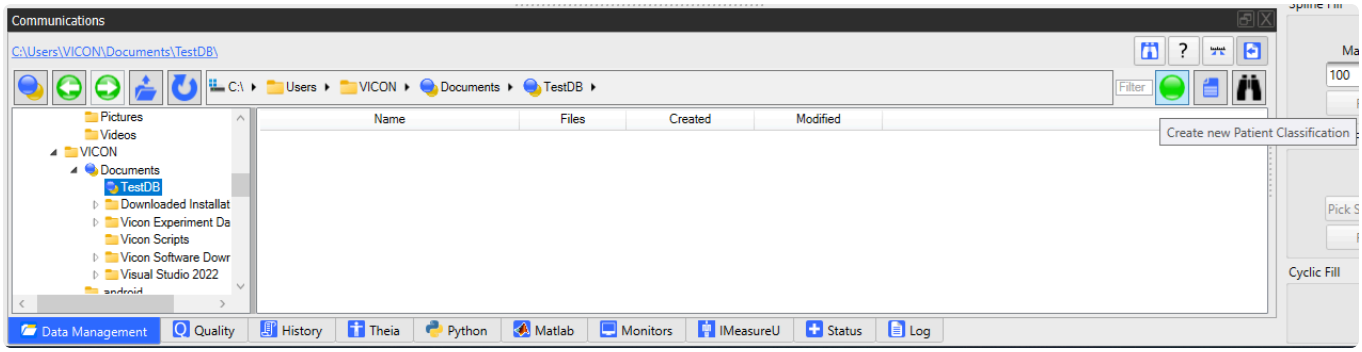

Selecting a database from the data management tab

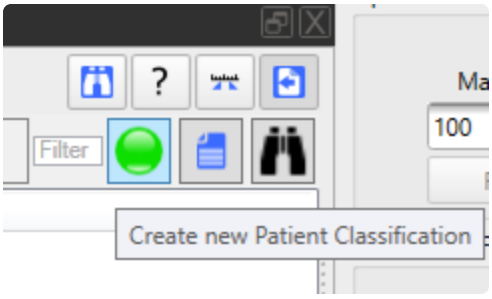

Creating a Subject Capture Session

In order to use the database you need to set up a trial.

First you must create a new patient classification (a group for your subjects).

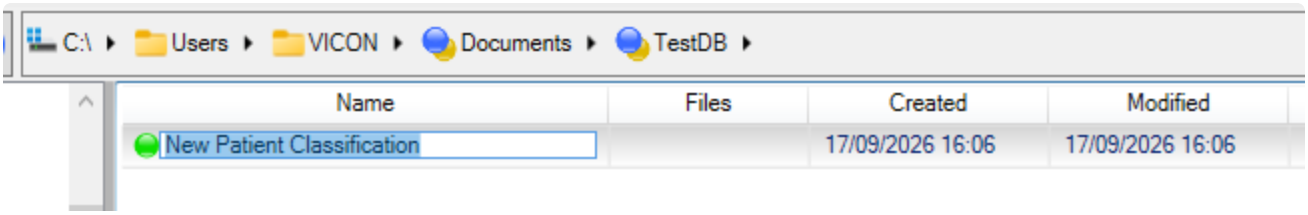

New/empty database directory

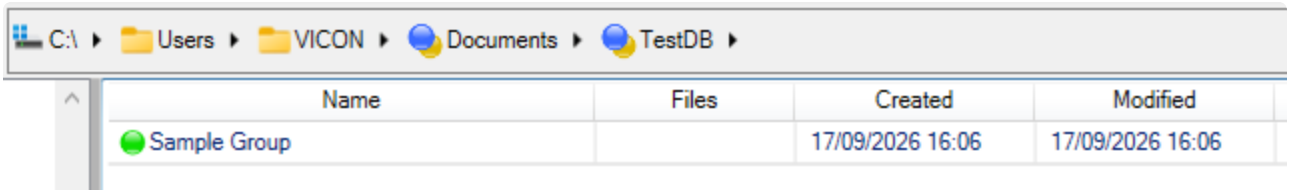

Creating a classification group

Click the button and name your group.

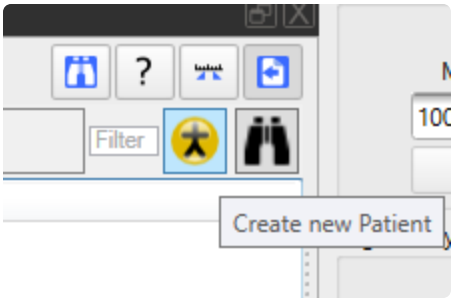

Naming the classification group

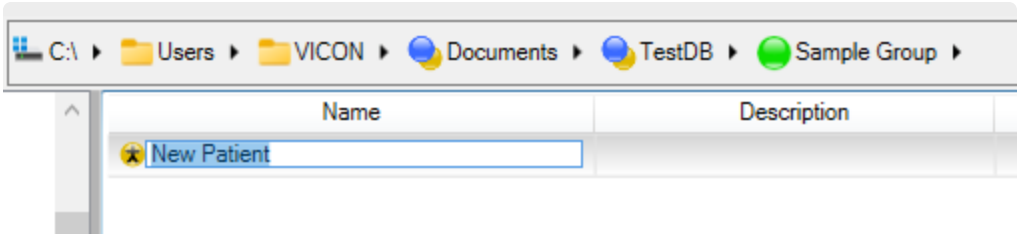

A named classification group

Double click the group to enter the directory. You'll see the button - previously '**create new patient classification**' has now changed.

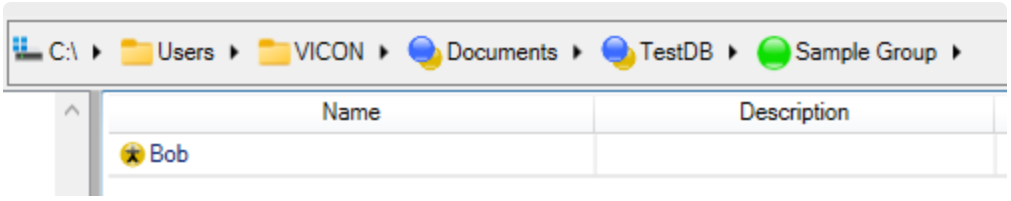

Click the new button to create a new patient (subject) and name them.

Creating a patient

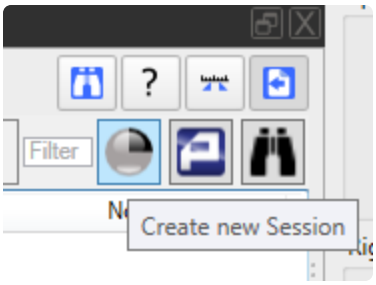

Naming a patient

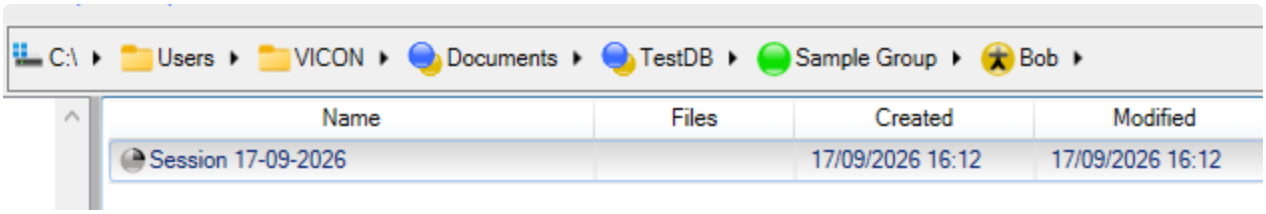

A named patient

As before double-click to enter the directory - the available buttons will now change again.

Click the grey circle with the black segment to create a new capture session.

Creating a capture session

A named capture session

If you open the **resources panel**, and switch to the **subjects tab,** you will now notice that the previously inactive (greyed-out) buttons are now able to be clicked.

This means your capture session is ready to start adding data. You can now create a labelling skeleton.
